- The form accepts invalid date combinations where the graduation year is earlier than the birth year, e.g., birth year = 2000 and graduation year = 1999. This logical error is not caught during validation and the form submits successfully.
- The Alternate Number field is currently accepting the same number as the primary contact.
- yes and it will also accept wrong project start date and end date eg: birth year = 2001 and project start date = 1970 to end date 1985.
- In address details
The form is being accepted even when I enter a PIN code from a different state, regardless of the selected state.
- In the 'Employee Name' button, the employee's name is Manjunath, but the 'Account Holder Name' field is accepting a different name, such as Rajesh. We need to fix this issue to ensure both names match.
- The email input field accepts invalid formats, such as random text without a valid email structure (e.g., abc123, test@, user@domain, etc.), and allows the form to be submitted.
- This form will reject the above 2mb pdf file jpg file and png pin code must be taken only 6 digit code and doesn't take the above 6 digit code.
- In the HR portal the heading currently labeled as 'Department' should be changed to 'Experience' instead
- When we are viewing image it's not showing an error and it's submitted successfully when we are entering pincode. It's accepted even when I enter a PIN code from a different state.
- In HR portal Employee signature is showing failed to load signature.
- In the HR portal under the experience section, the project name entered in the 'Project Name' field is incorrectly appearing under the 'Department' section. It should be displayed under a separate heading labeled 'Project'.

- Ensure the alternate number is exactly 10 digit , no symbols or country code is not taken.
- In education section while we enter bachelors degree it needs to display multiple options Likewise, it works with higher studies field as well we need to be given options to choose the streams instead of entering the field names.
